

Gateway PCC — User Manual

Adding a Client, a Facility, and Importing a 2FA QR Code

This guide walks you through setting up your facilities in Gateway PCC so you can launch and auto-sign-in to PointClickCare (PCC) from the desktop app.

The order is always:

1. **Create a Client** (the organisation / company)
2. **Add a Facility** under that client (the individual site + its PCC login)
3. **Import the facility's QR code** (its PointClickCare two-factor secret)

Note on the two different QR codes

- When **you** sign in to *Gateway PCC itself*, you scan a QR with ****Google Authenticator**** (this is your personal login 2FA — set up once).
- The QR described in this manual is **different**: it is the ****facility's PointClickCare 2FA secret****, which Gateway PCC stores so the desktop app can type the 6-digit PCC code for you at launch. You do *not* scan it with your phone — you upload the image file into Gateway PCC.

Before you start

- Sign in to the Gateway PCC website with your username, password, and your Google Authenticator code.
- Open **⚙ Settings** (button at the bottom-left of the sidebar). Everything in this guide happens on the Settings screen.

Step 1 — Create a Client

A **client** is the top-level organisation. Facilities live underneath it.

1. On the **Settings** screen, scroll to the **Clients** card.
2. In the **New client name** box, type the client's name (e.g. `Sunrise Care Group`).
3. Click **+ Create Client**.

The client now appears in the left sidebar tree and in the **Client** dropdown of

the *Add Facility* form below.

Shortcut: You can skip this step and create the client while adding the facility — see the "...or type a new client" field in Step 2.

Step 2 — Add a Facility

A **facility** is a single site with its own PointClickCare login. Scroll to the

Add Facility card on the Settings screen.

2a. Choose the client

- Pick the client from the **Client** dropdown, **or**
- Type a brand-new client name in **...or type a new client** — it will be created

automatically when you save the facility.

2b. Fill in the facility details

Field	What to enter
Facility name (required)	The site name, e.g. North Campus
Location	City/state, e.g. Chicago, IL (optional)
Site URL	Leave blank to use the default PCC login site from Settings, or enter a specific URL
Username	The facility's PointClickCare username
Password	The facility's PointClickCare password

Tip — copy from an existing facility: Use **Copy details from** at the top of the card to clone another facility's client, name, location, URL and selectors. It deliberately does **not** copy the username, password, or QR — so you only fill in the new login's specifics.

2c. (Don't click Add yet)

Before saving, import the facility's PCC two-factor QR code — see Step 3. You can then click **+ Add Facility** once.

Step 3 — Import the QR Code (PCC two-factor secret)

The **Two-Factor (TOTP)** block is in the middle of the *Add Facility* card. It has two tabs:

- **Import QR code** — upload a QR image (most common)
- **Paste hash / secret** — paste the raw secret text instead

Option A — Import a QR image (recommended)

1. Make sure the **Import QR code** tab is selected.
2. Click **Choose File** and select the QR code **image** (a `.png`, `.jpg`, or a

screenshot of the PCC 2FA QR).

1. Click **Decode QR**.
2. You should see "**Secret captured ✓**", and a **live 6-digit code** appears in

the *Current 6-digit code* box with a countdown timer.

✓ Seeing a live code that refreshes every ~30 seconds means the secret is valid and stored correctly.

Option B — Paste the secret instead

If you have the secret as text rather than an image:

1. Click the **Paste hash / secret** tab.
2. Paste the base32 secret (Gateway PCC also accepts a full

`otpauth://...` URL or a spaced/hyphenated secret — it cleans it up for you).

1. Click **Verify**.
 2. Confirm the **live 6-digit code** appears.
-

Step 4 — Save the Facility

1. Click **+ Add Facility**.
2. You'll see "**Saved ✓**" and Gateway PCC jumps straight to the new facility's

detail screen.

1. On that screen, the **TOTP / 2FA** row shows "**Configured ✓ — current code ...**", confirming the secret is saved and working.

The facility now appears under its client in the left sidebar.

Verifying it all worked

On the facility's detail page you should see:

- **Location, Site URL, Username** filled in
- **TOTP / 2FA: Configured** ✓ with a live, refreshing 6-digit code

If the TOTP row instead says "**⚠ Stored secret is not valid — re-add the QR/hash**", go back to **Edit** and re-import the QR or re-paste the secret.

Launching the facility

Adding and managing facilities happens on the **website**. **Launching and auto-signing-in **happens in the** desktop app**:

1. Open the Gateway PCC **desktop app** and sign in (same username, password, and Google Authenticator code).
 1. Find the facility in the sidebar (or use the search box).
 2. Click **Launch** — the app opens Firefox (through the US proxy if enabled), fills in the username and password, and types the current PCC 6-digit code for you automatically.
-

Quick reference

I want to...	Where
Create a client	Settings → Clients → + <i>Create Client</i>
Add a facility	Settings → Add Facility
Create a client <i>while</i> adding a facility	<i>...or type a new client</i> field
Import the PCC QR	Add Facility → Import QR code tab → <i>Decode QR</i>
Paste the PCC secret instead	Add Facility → Paste hash / secret tab → <i>Verify</i>
Copy settings from another facility	Add Facility → Copy details from
Edit / delete a facility	Click the facility in the sidebar → Edit / Delete
Launch & sign in	Desktop app → pick facility → Launch

Troubleshooting

- **"Could not read a QR code from that image."** — The image is too small, blurry, or cropped. Use a clearer, larger screenshot of the full QR (including the white border around it) and try **Decode QR** again.

- **"Not a valid authenticator secret."** — The pasted text isn't a valid base32 secret. Use the QR image instead, or paste the full `otpauth://` URL.

- **No live code appears after decoding** — Re-select the file and click **Decode QR** again; confirm you picked an image file, not a PDF.

- **Facility name is required** — You must enter a facility name before saving.

- **Forgot to pick a client** — Choose one from the dropdown or type a new client name, then click **+ Add Facility** again.
